

# Santa Ana

- B E R M U D A -

## Santa Ana bermuda was born and bred California.

It is one of the most drought tolerant hybrid bermuda grasses, with a short dormancy period. While normally used in Southern California, Santa Ana pushes the northern boundary of the transition zone, and is quite successful. Its ability to tolerate cooler temperatures, excellent fall color retention, and early spring green up help push the growing and climatic regions of this bermuda variety. Its medium-fine deep blue-green color and wide range of mowing heights make it an ideal choice for golf courses, athletic fields, commercial and residential lawns.

## Features and Benefits

### Color

- Deep dark blue-green

### Texture

- Fine to medium-fine

### Performance

- Short winter dormancy
- Wide range of mowing heights
- Recovers quickly from injury due to high shoot density and vigorous growth habit
- Displays an above average tolerance to acidic, alkaline, saline and poor drained soils
- Tolerant of heat, heavy foot traffic and drought

### Climate

- Thrives from coastal to warm and hot climates USDA zones 7-11

### Shade Tolerance

- Not shade tolerant, full sun preferred, slightly more shade tolerant than all other Tifway varieties

### Maintenance

- Moderate level of maintenance. Fall overseeding may be required for winter color

### Mowing

- 1/4" – 3/4", power reel or rotary

### SANTA ANA CAN BE SEEN AT
